

NC3T's Careers in the Classroom

Professional Learning Experiences to Help Core Academic and other Elective Teachers Engage in Career Readiness

With the growing emphasis across the nation on career readiness, many teachers are being asked to integrate career readiness into their classrooms. However, many who teach the “core academic subjects” of English language arts, mathematics, history/social studies, and science, and other teachers of academic electives like the arts and social sciences, might not have any practical steps they can take.

The National Center for College and Career Transitions (NC3T) is offering a new professional development experience designed to help all teachers embrace Career Readiness while still effectively delivering their core content.

Careers in the Classroom Train-the-Trainer Workshop

This Professional Learning Experience, *Careers in the Classroom*, offers resources and training in three domains:

Developing a general understanding about why today's youth need stronger career understanding and employability skills as they graduate from high school;

Strengthening teacher knowledge about careers that link to, or draw from, the subject matter they teach. Through *Careers in the Classroom*, teachers in English-language arts, mathematics, science, and history-social studies, arts and social sciences will receive simple, easy to understand information about career fields that relate to their respective content matter.

Careers in the Classroom also provides common definitions of employability (or “soft”) skills that all teachers can use to develop consistency across

the curriculum, with specific guides for creating projects and activities in the classroom that draw out and reinforce these employability skills. Most importantly, these activities will not distract from, but will help deepen, student mastery of the curriculum subject matter.

NC3T Professional Development providers deliver this content during a four-hour workshop designed as a Train-the-Trainer model. School leaders and teacher leaders are equipped to share what they learn with their colleagues through Professional Learning Communities in their school or district.

Careers in the Classroom School Resource Kit

With the workshop, NC3T provides a 50-page *Careers in the Classroom* School Resource Kit (valued at \$100) with career information sheets, lesson plans and activity plans, that the school leader can take back to their school and use to run a Professional Learning Community (PLC) on the topic.

One Resource Kit must be purchased for each school building in which staff members will receive training or participate in a PLC. Recipients of the kit will sign a form acknowledging that the license for use of materials only applies for that specific school building.

On-Line Learning Modules

Careers in the Classroom 101- Online

Based on materials from the workshop, NC3T will also design self-paced online learning modules, each targeted by specific content area, that teachers can take to deepen their understanding. Each online mini-course will be self-paced and take approximately 3 hours of learning time, with built in quizzes and a certificate of completion.

Careers in the Classroom Online PLC Certification

Any educator who has completed the Careers in the Classroom 101 online course or the

Careers in the Classroom Workshop is eligible to take an additional online course to receive PLC Certification. This online course takes 90 minutes to complete. The PLC Certification supports the education professional in leading school-based professional learning communities about the concepts of Career Ready Classroom.

Right to Use

With the Train-the-Trainer model, attendees will receive materials that they can use and distribute as part of their internal professional development responsibilities, but only in the district or college where they work. Only NC3T has the right to provide the PLC training to staff members from other districts or colleges.
